DEMONSTRATION PLANS

The patterns presented in this book are intended for use by builders, developers, and producers of manufactured housing, as well as individual home owners as they renovate and rebuild their own houses. The biggest challenge will be to communicate the values and character of Louisiana architecture to a national homebuilding industry.

To demonstrate the use of the Pattern Book, a workshop was conducted using standard plans provided by various builders. Each plan was then transformed by using the patterns in the book for a particular style. It is recommended that the green design guidelines be followed to ensure an energy-efficient house. These are illustrated in the demonstration plans by showing the standard plan and elevation (as given) alongside the modified plan and transformed elevation for that house design. The patterns in this book have been modified to meet current construction practices and include patterns with a wide range of costs.

On the following pages, we present a collection of houses, some manufactured, some using conventional wood frame, and some using the SIP panel method. These houses have been designed by various architects and are illustrative of the patterns presented in this book.
DEMONSTRATION 1:

HABITAT HOUSE
This simple, one-story cottage was modified by expanding the porch and then simply using the appropriate windows and trim elements from the Arts & Crafts section of this Pattern Book.

DEMONSTRATION 2:

BUILDER PRODUCTION HOUSE
This ranch style house is a standard model currently being used in Florida by a developer interested in building in Louisiana. The plans were provided to the LRA by Aercon, LLC. It was modified in plan by adjusting the garage location and the arrangement of living spaces. A porch was added. Instead of the Spanish style of the Florida model, the architectural elements from the Louisiana Vernacular section of this Pattern Book were used.

DEMONSTRATION 3:

MODULAR HOUSE
This two-story house, provided to the LRA by Integrity Building Systems, is built with four modules. Within the constraints of the manufacturer, this house was modified by adding a porch and using architectural elements from the Louisiana Victorian section of this Pattern Book.

DEMONSTRATION 4:

ROWHOUSE
These three-story, park-under rowhouses are typical models used by one of the nation’s largest home builders. The only modification in plan was to rearrange the stairs on the ground level. Galleries and balconies were added. Elements from both the Louisiana Vernacular and Louisiana Classical sections of this Pattern Book were used to create two distinct elevations.
