

Recommended Allocation of Additional Infrastructure Funds

Purpose: The following percentages will be used to allocate infrastructure dollars that are distributed to local government for recovery plan implementation. These percentages are based on our best estimates of infrastructure need as determined by losses due to the hurricanes. It does not account for pre-storm shortfalls in infrastructure.

Method:

Calculations are based on a combination of two factors:

- 1) Dollar amount of current obligated and un-obligated project worksheets submitted by the parishes for categories C through G, and
- 2) Level of damage to housing units.

The project worksheets for categories C through G are the best available data that reflects total infrastructure damage at the parish level. $\frac{2}{3}$ of the weight goes to the dollar amount of the project worksheets.

The level of damage to housing units is based on statewide inspections of residential housing units. Homes classified as “major” damage were assumed to be 50% damaged and homes with “severe” damage were assumed to be complete 100% rebuilds. In the damage level calculation homes with severe damage counted as 1 unit and homes with major damage counted as $\frac{1}{2}$ of a unit. This was to fairly account for parishes that had a larger percent of their housing stock wiped out as opposed to just damaged. $\frac{1}{3}$ of the weight goes to the level of housing damage.
